

Week 05 Journal

Name: Zunaid Ebne Hie

Student ID: 12221209

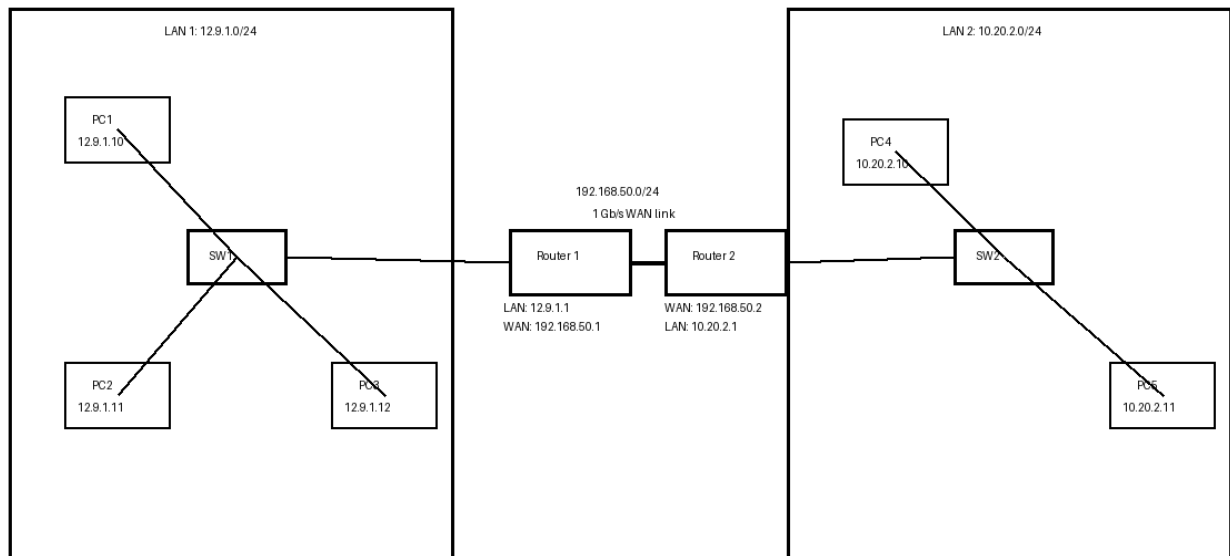

Task 2 – View Routing Table

A routing table tells the computer where to send packets. Each row includes a destination network, next-hop gateway, interface, and metric. The default route 0.0.0.0/0 is used when no more specific route exists.

Task 3 – IP Network Design

The IP design uses the last four digits of the student ID: 1209. LAN 1 uses 12.9.1.0/24.

Device	Interface	IP Address	Network
PC1	Ethernet	12.9.1.10	12.9.1.0/24
PC2	Ethernet	12.9.1.11	12.9.1.0/24
PC3	Ethernet	12.9.1.12	12.9.1.0/24
Router 1	LAN	12.9.1.1	12.9.1.0/24
Router 1	WAN	192.168.50.1	192.168.50.0/24
Router 2	WAN	192.168.50.2	192.168.50.0/24
Router 2	LAN	10.20.2.1	10.20.2.0/24
PC4	Ethernet	10.20.2.10	10.20.2.0/24
PC5	Ethernet	10.20.2.11	10.20.2.0/24

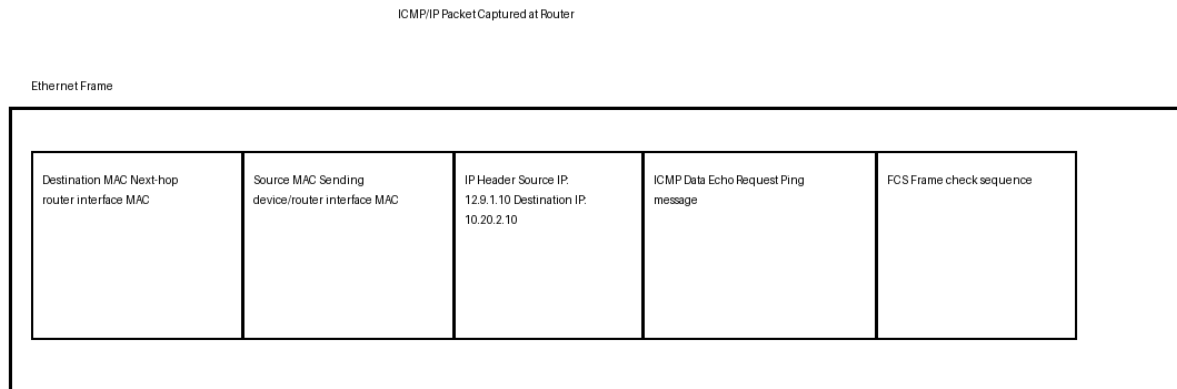

Simplified Routing Tables

PC1, PC2, PC3: 12.9.1.0/24 is directly connected. Default route is 12.9.1.1. Router 1: 12.9.1.0/24 and 192.168.50.0/24 are directly connected. 10.20.2.0/24 goes via 192.168.50.2. Router 2: 10.20.2.0/24 and 192.168.50.0/24 are directly connected. 12.9.1.0/24 goes via 192.168.50.1. PC4 and PC5: 10.20.2.0/24 is directly connected. Default route is 10.20.2.1.

ICMP/IP Packet Diagram

If PC1 sends a ping request to PC4, the source IP is 12.9.1.10 and the destination IP is 10.20.2.10. MAC addresses change at each hop, but IP addresses remain end-to-end.

The IP addresses stay end-to-end, but Ethernet MAC addresses change at each hop.

Task 4 – Academic Integrity Outcomes

A student copying another student's work or submitting online material without acknowledgement may breach academic integrity. Possible outcomes include warning, mark reduction, resubmission, or a fail grade depending on seriousness.

Recommendations: write in your own words, reference sources properly, and ask tutors for help before the deadline.

Task 5 – IP Address Lookup

An IP lookup website usually identifies the public IP address and approximate city or provider. It normally does not show the exact device or precise physical location.
